

Version Change Documentation for NewsML™ 1.2

Author: Michael Steidl, MD IPTC

Date: 2003-10-26

This document shows all changes made for version 1.2 of NewsML™

1. Element Contribution added

DTD source:

<!ELEMENT Contribution EMPTY>

<!--ATTLIST Contribution

%localid;

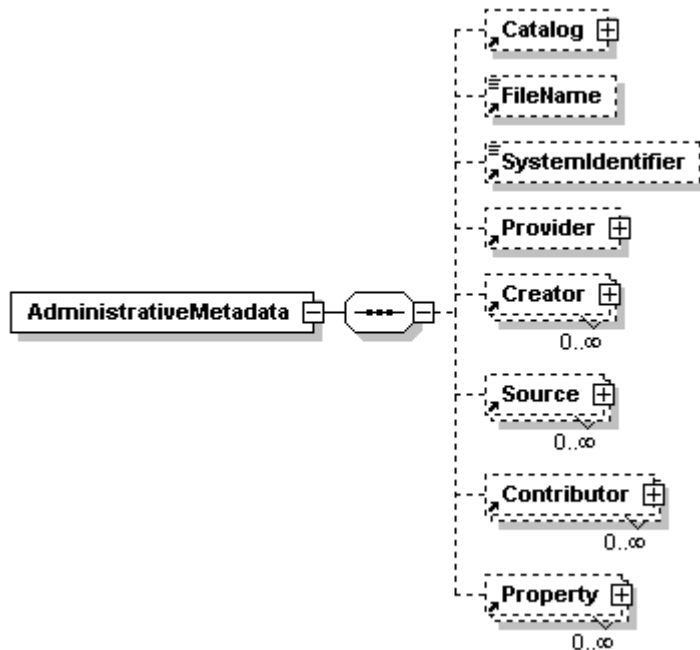

%formalname;

Comment:

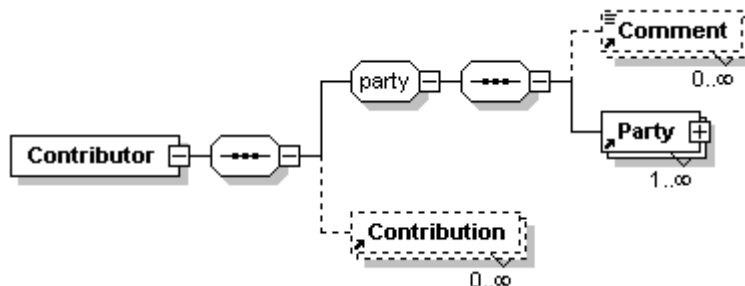

The contribution of a Party in the scope of the creation or the modification of a news object.

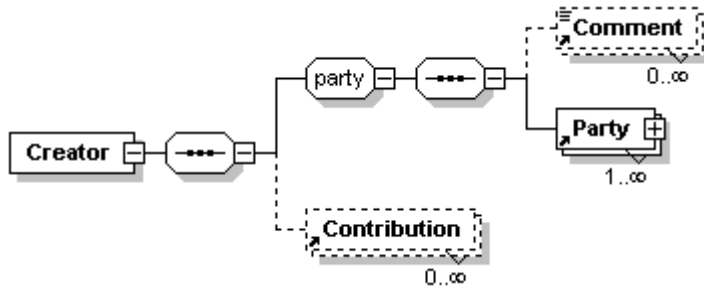

2. In AdministrativeMetadata: element **Creator** made repeatable

(DTD source: Creator*)

3. Repeatable Contribution element added to Creator and Contributor:

4. **Comment for the %formalname entity in the NewsML™ DTD changed:**

This sentence is deleted:

“If there is no Vocabulary attribute and the above algorithm fails to identify a resource that serves as the controlled vocabulary, there is an error, which the NewsML system may signal to the user.”

5. **Specification for the Language element added to the Functional Specification:**

"The FormalName attribute of the Language element is controlled by RFC 3066 and not by a Topicset"

The applicable paragraph in chapter 5.9.3 reads now:

The Language element indicates the, or a, language used in a content item. The value of the FormalName attribute is a formal name for the Language element. Its meaning and permitted values are determined by RFC 3066 as a special kind of controlled vocabulary.
