

Efficient Standards: IPTC' NewsML-G2, ninjs and more ...

WAN-Ifra Expo 2014
Content Media Port

15 October 2014, Amsterdam, Netherlands

Michael Steidl, Managing Director, IPTC

Who is IPTC

IPTC is the global standards body of the news media

- A not-for-profit organisation with more than 50 members
- ... from news agencies, newspapers, broadcasters and systems vendors

... only a subset
of members
is shown

What IPTC does

**Our mission
is to simplify the distribution of information.**

We simplify by

- **Structured containers** for the distribution of
 - All media types: text, photo, audio, video
 - Data about events and sports
 - Data for editorial planning...containing the content and descriptions/metadata of it
- **Rights expressions** associated with media content
- **Terms to categorize news** content (in many languages)

Example NewsML

- A technical format to move from A to B
 - Text (plain text, web pages, PDF ...)
 - Photos (of all sizes)
 - Videos (SD, HD, UHD – of any videoformat)
 - Packages of such news items:
as flat lists, ordered lists, or even structured trees
- From “A” to “B” could be:
 - From a news agency to a newspapers/magazine
 - From newspaper A to magazine B
 - From newspaper A’s editorial system to the system creating its mobile app

NewsML-G2 in practice ...

Let's have a look at this.

Dr. Gerd Kamp of dpa presents how this format is used inside this company.

NewsML-G2

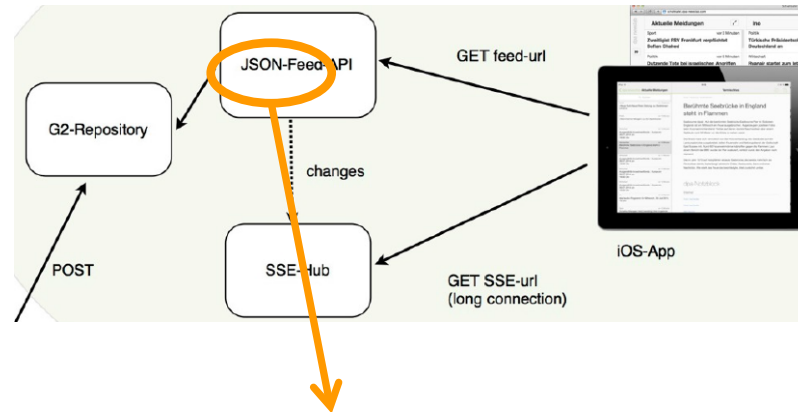

NewsML-G2 Summary

... can be used:

- for **all types** of news and media content
- for data about events and sport competitions
- for editorial planning data
- It is a **single format for all these purposes**.
You only need to dig into the technology once – that's it.
- for the exchange of content **between different companies**
- for moving content from system X to system Y **in the same company**.

News for mobile apps = ninjs

JSON feed for news by IPTC's **ninjs**

- Simple and lightweight design
- Easy transformation from NewsML-G2 to ninjs

For the JSONists:

```

"uri" : "http://ninjs.example.com/newsitems/20130709simp123",
"type" : "text",
"versioncreated" : "2013-07-09T10:37:00Z",
"byline" : "Paulo Santalucia and Frances d'Emilio",
"headline" : "Captain of wrecked cruise ship on trial in Italy",
"body_text" : "GROSSETO, Italy (AP) -- The trial of the captain of
"body_xhtml" : "<p>GROSSETO, Italy (AP) -- The trial of the captain
  
```

Mark-up for online news = rNews

U.S. Troops to Use Bases in Turkey

International New York Times

By ERIC SCHMITT and KIRK SEMPLE OCT. 12, 2014

WASHINGTON — Turkey will allow American and coalition troops to use its bases, including a key installation within 100 miles of the Syrian border, for

- Human readers see only the journalistic facet of web news
- The search engines see more: data precisely describing the content and relationships (e.g. „that’s a photo of this article“)
- How this is done for news articles is defined by rNews - and has been adopted by schema.org = Google & Bing & Yahoo & Yandex
- For the experts:

```
<p class="byline-dateline"><span class="byline" itemprop="author creator" itemscope itemtype="http://schema.org/Person" itemid="http://topics.nytimes.com/top/reference/timestopics/people/s/eric_schmitt/index.html">By <a href="http://topics.nytimes.com/top/reference/timestopics/people/s/eric_schmitt/index.html" rel="author" title="More Articles by ERIC SCHMITT"><span class="byline-author" data-byline-name="ERIC SCHMITT" itemprop="name">ERIC SCHMITT</span></a> and </span><span class="byline" itemprop="author
```

Express rights – by RightsML

This photo can be used only for printing in newspapers and for display on websites and must not be published for more than 30 days

- News content is distributed quickly – no time to negotiate rights ...
- Associating item-specific rights must be simple
- RightsML is simple
 - Permissions for specific uses – with constraints (e.g. by countries or by time)
 - Prohibitions of specific uses
 - Duties may be added

Why IPTC standards help:

- They are available “**ready to use**”
You do not have to reinvent the wheel – and pay for that.
- They are **flexible**: set a mainstream and cover your individual use cases too
- They are **persistent**: e.g.
 - a text-only news format since 1979
 - the IPTC photo metadata since 1994

They simplify the distribution of information
in an efficient way

Thank you for your time
